BÁO CÁO TIẾN ĐỘ THỰC HIỆN NIỀN LUẬN CƠ SỞ MẠNG MÁY TÍNH & TRUYỀN THÔNG DỮ LIỆU

Tuần 13

- Đề tài: Xây dựng ứng dụng mobile xem thời tiết và chất lượng không khí sử dụng Openweathermap.org APIs
- Giảng viên hướng dẫn: Trần Thị Tố Quyên Nhóm: 06
- Sinh viên thực hiện: Trần Thanh Hòa B1908387

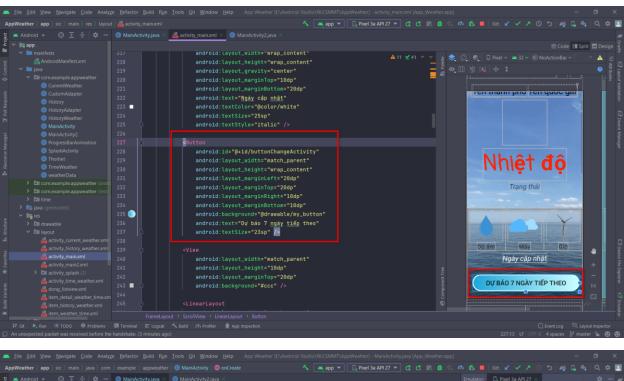

I. CÔNG VIỆC ĐÃ THỰC HIỆN

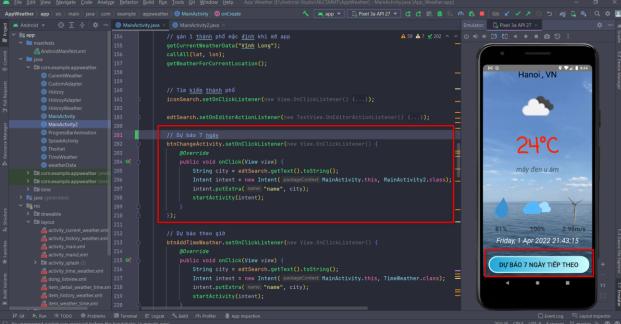

Đã báo cáo ở phần báo cáo trước (Tuần 6)

II. CHƯƠNG TRÌNH

- 1) Thiết kế giao diện màn hình chính, đổ dữ liệu từ API về màn hình chính
- 2) Dự báo thời tiết trong 7 ngày tới
- 2.1 Thiết kế giao diện:

Bước 1: Tạo thêm button ở file activity_main.xml

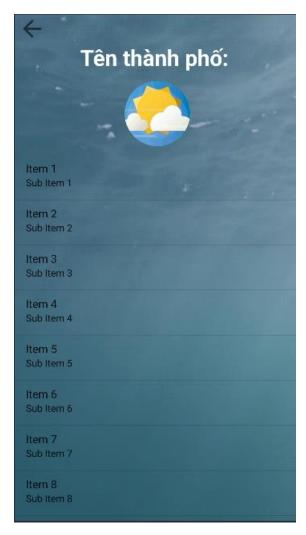

Bước 2: Thiết kế giao diện ở file activity_main2.xml để hiển thị dữ liệu khi gọi từ api về

```
<?xml version="1.0" encoding="utf-8"?>
<FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools"
    android:id="@+id/action_main2"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity2">

<pl.droidsonroids.gif.GifImageView</pre>
```

```
android:layout width="match parent"
android:layout height="match parent"
android:background="@drawable/bg"/>
android:layout width="match parent"
android:layout height="match parent"
android:orientation="vertical">
    android:id="@+id/imageViewBack"
    android:layout width="50dp"
    android: layout height="40dp"
    android:src="@drawable/ic baseline arrow back 30" />
    android:layout width="wrap content"
    android:layout height="wrap content"
    android:text="Tên thành phố: "
    android:textSize="32sp"
    android:textStyle="bold"
    android:layout marginBottom="10dp"
    android:id="@+id/textViewCityName"/>
    android:layout_width="100dp"
android:layout_height="100dp"
    android:background="@drawable/iconweather"
    android:layout marginBottom="10dp"/>
    android:layout width="match parent"
    android:layout height="match parent"
    android:id="@+id/listView">
```

Kết quả sẽ ra như sau:

Bước 3: Do sử dụng ListView để đổ dữ liệu nên cần tạo thêm dong_listview.xml để chứa dòng hiển thị kết quả

```
android:layout width="match parent"
android:layout height="wrap content"
android:orientation="horizontal"
android:gravity="center"
android:layout marginLeft="10dp"
android:layout marginRight="10dp"
android:layout marginBottom="20dp"
   android:id="@+id/textViewTrangthai"
   android:layout weight="1"
   android:layout width="0dp"
   android:layout height="wrap content"
   android:text="Trang thái"
   android:textSize="22sp"
   android:textStyle="italic"
   android:gravity="left"/>
   android:layout_width="40dp"
   android:layout_height="50dp"
   android:src="@drawable/android"
   android:id="@+id/imageViewTrangthai"
   android:layout marginLeft="30dp"/>
    android:layout_width="0dp"
   android:layout_height="wrap_content"
   android:gravity="right">
        android:id="@+id/textViewMinTemp"
        android:layout_width="wrap_content"
        android:layout height="45dp"
        android:text="Min Temp"
        android:textColor="@color/white"
        android:textSize="20sp"
        android:id="@+id/textViewIcon"
        android:layout width="wrap content"
        android:layout height="45dp"
        android:textColor="@color/white"
        android:textSize="20sp"
        android:id="@+id/textViewMaxTemp"
        android:layout width="wrap content"
        android:layout height="45dp"
```

2.2 Đổ dữ liệu về app:

Bước 1: Tiến hành code trong file MainActivity2.java để lấy dữ liệu từ API về và hiển thị ra màn hình

```
package com.example.appweather;
import androidx.appcompat.app.AppCompatActivity;
import android.content.Intent;
import android.util.Log;
import android.widget.ImageView;
import android.widget.ListView;
import android.widget.TextView;
import com.android.volley.Request;
import com.android.volley.RequestQueue;
import com.android.volley.toolbox.StringRequest;
import org.json.JSONArray;
import org.json.JSONException;
import org.json.JSONObject;
import java.text.SimpleDateFormat;
import java.util.ArrayList;
public class MainActivity2 extends AppCompatActivity {
    ImageView imgBack;
    TextView txtCityName;
    CustomAdapter customAdapter;
    ArrayList<Thoitiet> mangthoitiet;
```

```
@Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity main2);
        Anhxa();
        Intent intent = getIntent();
        String city = intent.getStringExtra("name");
        Log.d("ketqua", "Du lieu truyen qua: " + city);
            cityName = "Vinh Long";
            currentWeather(cityName);
            currentWeather(cityName);
        imgBack.setOnClickListener(new View.OnClickListener() {
            public void onClick(View view) {
                onBackPressed();
        });
        RequestQueue requestQueue =
Volley.newRequestQueue (MainActivity2.this);
        String url =
"https://api.openweathermap.org/data/2.5/weather?q="+data+"&units=metric&lang
=vi&appid=7b16a3bb0d4c6253ab56ca6a2a14f500";
        StringRequest stringRequest = new StringRequest (Request . Method . POST,
                    public void onResponse(String response) {
                            JSONObject jsonObject = new JSONObject(response);
                            // Lấy lon và lat
                            JSONObject jsonObjectLonLat =
jsonObject.getJSONObject("coord");
                            lat = jsonObjectLonLat.getString("lat");
                            oneCallCurrentWeather(lat, lon);
```

```
String name = jsonObject.getString("name");
                            txtCityName.setText(name);
                        } catch (JSONException e) {
                            e.printStackTrace();
                new Response.ErrorListener() {
                    @Override
                    public void onErrorResponse(VolleyError error) {
        requestQueue.add(stringRequest);
    public void oneCallCurrentWeather (String lat1, String lon1) {
        RequestQueue requestQueue =
Volley.newRequestQueue (MainActivity2.this);
        String url =
its=metric&lang=vi&appid=7b16a3bb0d4c6253ab56ca6a2a14f500";
        StringRequest stringRequest = new StringRequest (Request.Method.GET,
                    public void onResponse(String response) {
                        Log.d("HI", response);
jsonObject.getJSONArray("daily");
                                JSONObject jsonObjectList =
jsonArrayList.getJSONObject(i);
                                String day= jsonObjectList.getString("dt");
                                long 1 = Long.valueOf(day);
                                // Chuyển thành mili giây
                                SimpleDateFormat simpleDateFormat = new
SimpleDateFormat("EEE, d MMM yyyy");
                                String Day = simpleDateFormat.format(date);
```

```
JSONObject jsonObjectTemp =
jsonObjectList.getJSONObject("temp");
                                String minTemp =
jsonObjectTemp.getString("min");
jsonObjectTemp.getString("max");
                                 // -> cần chuyển đổi nhiệt độ sang kiểu int
                                Double y = Double.valueOf(minTemp);
                                Double x = Double.valueOf(maxTemp);
String.valueOf(x.intValue());
                                String NhietdoMin =
String.valueOf(y.intValue());
                                JSONArray jsonArrayWeather =
jsonObjectList.getJSONArray("weather");
                                JSONObject jsonObjectWeather =
jsonArrayWeather.getJSONObject(0);
jsonObjectWeather.getString("description");
                                String icon =
jsonObjectWeather.getString("icon");
                                mangthoitiet.add(new Thoitiet(Day, status,
                            customAdapter.notifyDataSetChanged();
                         } catch (JSONException e) {
                            e.printStackTrace();
                new Response.ErrorListener() {
                    @Override
                        Log.d("error", "hoa");
                });
        requestQueue.add(stringRequest);
    private void Anhxa() {
        imgBack = (ImageView) findViewById(R.id.imageViewBack);
        txtCityName = (TextView) findViewById(R.id.textViewCityName);
        lstView = (ListView) findViewById(R.id.listView);
```

```
mangthoitiet = new ArrayList<Thoitiet>();
    customAdapter = new CustomAdapter(MainActivity2.this, mangthoitiet);
    lstView.setAdapter(customAdapter);
}
```

- Tạo thêm lớp Thoitiet để chứa các thông tin cần hiển thị như Day, Status, Icon, MinTemp, MaxTemp

```
package com.example.appweather;

public class Thoitiet {
    public String Day;
    public String Status;
    public String Image;
    public String MaxTemp;
    public String MinTemp;

    // Tao constructor cho 5 thang trên
    public Thoitiet(String day, String status, String image, String maxTemp,
String minTemp) {
        Day = day;
        Status = status;
        Image = image;
        MaxTemp = maxTemp;
        MinTemp = minTemp;
    }
}
```

- Tạo hàm dùng để lấy dữ liệu từ API về và hiển thị ra màn hình

```
AppWasher opp us now jave one cample appearable of ManAchings Contondapter

AppWasher op us now jave one cample appearable of ManAchings Contondapter

```

Bước 2: Chạy chương trình và nhận kết quả như sau

- 3) Dự báo thời tiết trong 2 ngày tới, dữ liệu được tính trên mỗi giờ3.1 Thiết kế giao diện
 - a) Tại activity_main.xml, bổ sung đoạn code sau
- Ở đây chúng ta sẽ sử dụng RecycleView và CartView để hiển thị dữ liệu
- Do đó, cần import thư viện vào app bằng cách mở tập tin build.gradle (app) và thêm 3 dòng code sau vào, sau đó nhấn Syn now:

```
// Recyclerview
implementation "androidx.recyclerview:recyclerview:1.2.1"
// Cardview
implementation "androidx.cardview:cardview:1.0.0"
implementation 'com.loopj.android:android-async-http:1.4.11'
```

- Trong file activity_main.xml

```
android:layout width="match parent"
android: layout height="wrap content"
android:background="#4D0B0A0A"
android:orientation="vertical">
    android:layout width="match parent"
   android:layout height="match parent"
   android:layout marginTop="10dp"
   android:layout marginBottom="10dp"
    android:gravity="center"
    android:orientation="horizontal"
    android:weightSum="10">
        android:layout width="0dp"
        android:layout height="wrap content"
        android:layout marginLeft="10dp"
        android:text="Dự báo theo giờ"
        android:textColor="@color/white"
        android:textSize="25sp"
        android:textStyle="bold" />
        android:id="@+id/textViewUpdateTime"
        android:layout width="0dp"
        android:layout height="wrap content"
        android:layout marginRight="5dp"
        android:gravity="right"
        android:text="Cập nhật: "
```

* Kết quả sẽ được:

- b) Do sử dụng RecycleView ở phần giao diện hiển thị ở trên nên cần phải tạo thêm item để hiển thị dữ liệu
- Ở đây chúng ta sẽ sử dụng CardView để hiển thị dữ liệu khi được gọi từ API về app.
- Tạo thêm file xml với tên **item_weather_time.xml** để chứa dữ liệu khi gọi từ API về

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.cardview.widget.CardView
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    tools:context=".MainActivity"</pre>
```

```
app:cardCornerRadius="8dp"
android:layout marginLeft="5dp"
android:layout marginRight="5dp"
android:layout marginBottom="20dp">
    android:layout width="100dp"
    android:layout height="180dp"
    android:background="@drawable/bg"/>
   android:layout width="100dp"
   android: layout height="180dp"
   android:gravity="center"
   android:orientation="vertical">
        android:id="@+id/tv time"
        android:layout width="wrap content"
        android:layout height="wrap content"
        android:layout marginBottom="5dp"
        android:text="Bây giờ"
        android:textColor="@color/white"
       android:textSize="20sp" />
       android:id="@+id/tv temp"
        android:layout width="wrap content"
        android:layout height="wrap content"
        android:layout marginBottom="5dp"
        android:textColor="#FFEB3B"
       android:textSize="20sp" />
        android:id="@+id/img icon"
        android:layout width="50dp"
        android:layout height="50dp"
        android:layout marginBottom="5dp"
        android:scaleType="centerCrop"
        android:src="@drawable/cloud" />
        android:id="@+id/tv speed"
        android:layout width="match parent"
        android:layout height="wrap content"
        android:layout marginBottom="5dp"
       android:text="m/s"
        android:textColor="@color/white"
        android:textSize="17sp" />
```

* Chạy đoạn code trên ta được:

3.2 Đổ dữ liệu lên màn hình

a) Thêm đoạn code này vào file MainActivity.java để lấy ra ngày giờ từ OneCall API và hiển thị lên màn hình

```
// Này là cập <u>nhật thời</u> gian <u>hiện</u> tại của Dự báo theo giờ
SimpleDateFormat simpleDateFormatDay = <u>new SimpleDateFormat( pattern: "HH:mm:ss");</u>
String DayTime = simpleDateFormatDay.format(date);
txtUpdateTime.setText("Cập nhật: " + DayTime);
```

b) Tao file Time.java

```
c) package time;

public class Time {
    private String imgIcon;
    private String time, temp, speed;

    public Time (String imgIcon, String time, String temp, String speed) {
        this.imgIcon = imgIcon;
        this.time = time;
        this.temp = temp;
        this.speed = speed;
    }

    public String getImgIcon() {
        return imgIcon;
    }

    public void setImgIcon(String imgIcon) {
        this.imgIcon = imgIcon;
    }

    public String getTime() {
        return time;
    }

    public void setTime(String time) {
        this.time = time;
    }
}
```

```
public String getTemp() {
    return temp;
}

public void setTemp(String temp) {
    this.temp = temp;
}

public String getSpeed() {
    return speed;
}

public void setSpeed(String speed) {
    this.speed = speed;
}
```

- File này sẽ chứa các tham số mà chúng ta cần gọi từ API về app
- Chứa các hàm gửi và nhận dữ liệu

d) Tạo file TimeAdapter.java

```
import android.content.Context;
import android.view.LayoutInflater;
import android.view.View;
import android.view.View;
import android.view.ViewGroup;
import android.widget.ImageView;
import android.widget.TextView;

import androidx.annotation.NonNull;
import androidx.recyclerview.widget.RecyclerView;

import com.example.appweather.MainActivity;
import com.example.appweather.R;
import com.squareup.picasso.Picasso;

import java.util.List;

public class TimeAdapter extends
RecyclerView.Adapter<TimeAdapter.TimeViewHolder> {
    private Context mContext;
    private List<Time> mListTime;

    public TimeAdapter (Context mContext, List<Time> mListTime) {
        this.mContext = mContext;
        this.mListTime = mListTime;
    }

    public void setData (List<Time> list) {
        this.mListTime = list;
    }
}
```

```
notifyDataSetChanged();
    @Override
   public TimeViewHolder onCreateViewHolder (@NonNull ViewGroup parent,
int viewType) {
        View view =
LayoutInflater.from(parent.getContext()).inflate(R.layout.item weather
    public void onBindViewHolder(@NonNull TimeViewHolder holder, int
        holder.tvTime.setText(time.getTime());
        holder.tvTemp.setText(time.getTemp() + "°C");
Picasso.with (mContext).load("https://openweathermap.org/img/wn/"+time.g
etImgIcon()+".png").into(holder.imgIcon);
        holder.tvSpeed.setText(time.getSpeed() + "m/s");
    @Override
    public class TimeViewHolder extends RecyclerView.ViewHolder {
        private TextView tvTime, tvTemp, tvSpeed;
        public TimeViewHolder(@NonNull View itemView) {
            super(itemView);
            imgIcon = (ImageView) itemView.findViewById(R.id.img icon);
            tvTemp = (TextView) itemView.findViewById(R.id.tv temp);
            tvSpeed = (TextView) itemView.findViewById(R.id.tv speed);
    public void giaiPhong() {
```

Chay chương trình:

- 3.3 Tạo thêm Activity mới. Dùng để hiển thị thời tiết trong 2 ngày tới dưới dạng RecycleView Vertical
 - a) Thiết kế giao diện
- Tạo tập tin activity_time_weather.xml

```
<?xml version="1.0" encoding="utf-8"?>
<FrameLayout xmlns:android="http://schemas.android.com/apk/res/android"</pre>
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
   android:layout width="match parent"
    android:layout height="match parent"
    tools:context=".TimeWeather">
        android:layout width="match parent"
        android:layout_height="match_parent"
        android:background="@drawable/bg"/>
        android:layout width="match parent"
        android:layout height="wrap content"
        android:orientation="vertical">
            android:layout width="match parent"
            android:layout height="wrap content"
            android:orientation="horizontal"
            android:weightSum="10"
            android:layout marginLeft="5dp"
            android:layout_marginRight="5dp"
            android:layout marginBottom="10dp">
                android:id="@+id/textViewCityNameTimeWeather"
                android:layout_width="0dp"
android:layout_height="wrap_content"
                android:text="Dự báo theo giờ: "
```

```
android:textSize="25sp"
    android:gravity="left"
    android:textColor="@color/white"
    android:textStyle="bold"/>
    android:id="@+id/closeTimeWeather"
    android:layout_width="0dp"
android:layout_height="40dp"
    android:src="@drawable/close"
    android:gravity="right"
    android:layout marginTop="5dp"
    android:layout marginRight="2dp"/>
android:layout width="100dp"
android:layout height="100dp"
android:background="@drawable/iconweather"
android:layout marginBottom="10dp"/>
android:layout width="match parent"
android:layout height="wrap content"
android:id="@+id/rcvDetailTime"/>
```

- Tạo thêm file item_detail_weather.xml để chứa dữ liệu hiển thị theo chiều dọc

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.cardview.widget.CardView
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="280dp">

    <pl.droidsonroids.gif.GifImageView
        android:layout_width="match_parent"
        android:layout_height="280dp"
        android:background="@drawable/bg" />

<LinearLayout
    android:layout_width="match_parent"
    android:layout_height="280dp"
    android:layout_height="280dp"
    android:layout_marginTop="5dp"
    android:layout_marginBottom="10dp"</pre>
```

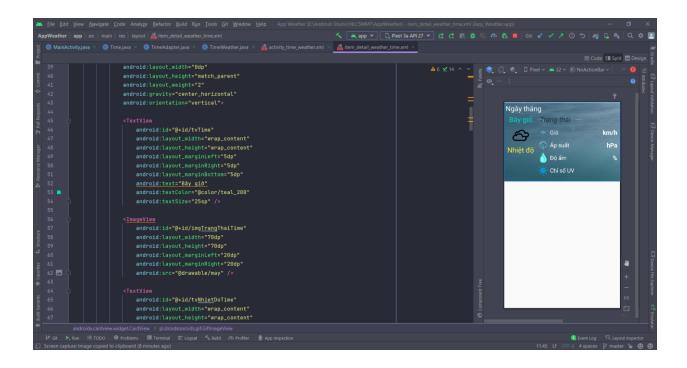

```
android:orientation="vertical"
android:paddingBottom="10dp">
    android:id="@+id/tvDay"
    android:layout width="wrap content"
    android:layout height="wrap content"
    android:layout marginLeft="5dp"
    android:layout marginRight="5dp"
    android:layout marginBottom="5dp"
   android:text="Ngày tháng"
   android:textColor="@color/white"
   android:textSize="25sp" />
    android:layout width="match parent"
    android:layout_height="wrap_content"
   android:orientation="horizontal"
        android:layout width="0dp"
        android:layout_height="match_parent"
        android:gravity="center horizontal"
        android:orientation="vertical">
            android:id="@+id/tvTime"
            android:layout_width="wrap_content"
            android:layout_height="wrap_content"
            android:layout_marginLeft="5dp"
            android:layout marginRight="5dp"
            android:layout marginBottom="5dp"
            android:text="Bây giò"
            android:textColor="@color/teal 200"
            android:textSize="25sp" />
            android:id="@+id/imgTrangThaiTime"

```

b) Đổ dữ liệu ra màn hình

- Tạo file DetailTime.java

```
public class DetailTime {
    private String imgTrangThaiTime;
    private String detailDay, detailTime, nhietDoTime, trangThaiTime,
gioTime, apSuatTime, doAmTime, chiSoUVTime;

    public DetailTime(String imgTrangThaiTime, String detailDay, String
    detailTime, String nhietDoTime, String trangThaiTime, String gioTime, String
    apSuatTime, String doAmTime, String chiSoUVTime) {
        this.imgTrangThaiTime = imgTrangThaiTime;
        this.detailDay = detailDay;
        this.detailTime = detailTime;
        this.trangThaiTime = nhietDoTime;
        this.trangThaiTime = trangThaiTime;
        this.apSuatTime = apSuatTime;
        this.apSuatTime = doAmTime;
        this.chiSoUVTime = chiSoUVTime;
}

public String getImgTrangThaiTime() {
        return imgTrangThaiTime;
}

public void setImgTrangThaiTime(String imgTrangThaiTime) {
        this.imgTrangThaiTime = imgTrangThaiTime;
}
```

```
public String getDetailDay() {
    return detailDay;
public void setDetailDay(String detailDay) {
    this.detailDay = detailDay;
public String getDetailTime() {
public String getNhietDoTime() {
public void setNhietDoTime(String nhietDoTime) {
   this.nhietDoTime = nhietDoTime;
